

ABSTRACT

The objects of the present invention are to provide a method for powderizing a non-saccharide ingredient(s), a powdery composition prepared by the method, and a base for powderizing a non-saccharide ingredient(s). The present invention solves the above objects by providing a method for powderizing a non-saccharide ingredient(s) which comprises the steps of allowing a saccharide-derivative(s) of α,α -trehalose to incorporate into a non-saccharide ingredient(s) and powderizing the resulting mixture; a powdery composition prepared by the method; and a base for powderizing non-saccharide ingredient(s) comprising the saccharide-derivative(s) as an effective ingredient(s).
